David Hume, 1711-1776

3. Hume's Faculty Psychology and His Logical Framework

Peter Millican
Hertford College, Oxford

73

Last Time ...

- We saw Hume's relative enthusiasm for *association of ideas*, in stark contrast with Locke and others, who had viewed it as a source of error.
 - Ideas can be associated by *resemblance*, *contiguity*, and *causation* (the three "natural relations"). But the associated ideas are still "separable" in imagination.
 - Inference from observed to unobserved operates by *custom*, which is a kind of associative principle (but is more than mere association by causation).
 - *Custom* thus provides the essential "guide of life", both for us and for animals. Without it, we could never draw inductive inferences.

74

74

3(a)

Introducing
Hume's Faculty Psychology

75

Hume and the Faculties

- Some of Hume's most famous arguments are expressed in terms of *faculties*:
 - T 1.3.6 (and E 4): inductive inference results from processes of *the imagination*, and is not "determin'd by" *reason* or *the understanding*.
 - T 1.4.2: belief in external objects is produced by *the imagination* rather than by *reason*.
 - T 2.3.3: *reason* alone cannot motivate action.
 - T 3.1.1 (and EPM): morals are "deriv'd from" *moral sense* or *sentiment* rather than *reason*.

76

76

Faculties, Induction, and Body

- "... the next question is, whether experience produces the idea by means of the understanding or imagination; whether we are determined by reason to make the transition, or by ... association ... of perceptions." (T 1.3.6.4)
- "The subject, then, of our present enquiry, is concerning the *causes* which induce us to believe in the existence of body: ... we ... shall consider, whether it be the *senses*, *reason*, or the *imagination*, that produces the opinion of a *continu'd* or of a *distinct* existence." (T 1.4.2.2)

77

77

Faculties and Morality

- "... we need only consider, whether it be possible, from reason alone, to distinguish betwixt moral good and evil, or whether there must concur some other principles to enable us to make that distinction." (T 3.1.1.3-4)
- "... The rules of morality, therefore, are not conclusions of our reason" (T 3.1.1.6)
- "There has been a controversy started of late ... concerning the general foundation of MORALS; whether they be derived from reason, or from SENTIMENT ..." (M 1.3)

78

78

Oxford Lectures on David Hume, 2024-25

Outline of Humean Faculties

■ The (external) Senses

These present to the mind *impressions of sensation* (e.g. of sight, touch, sound, smell, gustatory taste, bodily pain), thus creating within the mind *ideas* that are copies of those impressions.

■ Reflection (or internal sense)

Presents to the mind *impressions of reflection* ("secondary" impressions – see T 2.1.1.1 – that arise from the interplay of ideas in our mind, such as passions and emotions), thus again creating *ideas* that are copies of those impressions.

79

79

■ Imagination (or the Fancy)

Traditionally the faculty of *having images* (but not just *visual*). Hume takes *all* of our ideas to be *imagistic* (as copied from sense or feeling); hence this is *our primary thinking faculty*. The imagination can replay ideas in our thinking (often guided by *associative relations*), but can also *transpose, combine and mix* them.

■ Memory

Replays ideas in their original order (lacking the freedom of the imagination), and *with great vivacity*, almost like that of an impression. Thus Hume often refers to "impressions of the memory", and sometimes describes ideas in the imagination as copies of these (as at T 1.3.9.7, and note the title of T 1.3.5). *Thinking about memories* thus takes place in the imagination.

80

80

Reason and Will: The Traditional Major Division

■ Reason (or the Understanding)

Traditionally the overall *cognitive* faculty: discovers and judges truth and falsehood.

■ The Will

Traditionally the *conative* faculty: forms intentions in response to desires and passions.

Hume only rarely refers to the will as a faculty, and his view of reason, as we'll see later, is complicated by his treating all of our reasoning as taking place – through imagistic ideas – within "the imagination".

81

81

Distinguishing Between Faculties

■ imagination/reason (T 1.4.2.2); imagination/memory (T 1.3.5); imagination/the senses (T 1.4.2.2); imagination/passions (T 2.2.2.16).

■ reason/memory (T 3.3.4.13); reason/the senses (T 1.4.2.2); reason/the will (T 2.3.3.4).

■ memory/the senses (T 1.1.2.1).

■ Hume *never* distinguishes between "reason" and "the understanding", or between either of these and "the judgment". And he insists that our "intellectual faculty" is undivided (T 1.3.7.5 n.20).

82

82

Hume on Reason and Understanding

■ Hume, like many other philosophers, uses the terms "reason" and "the understanding" interchangeably dozens of times, for example:

"When the mind [makes an inductive inference] it is not determin'd by *reason*, but by certain principles, which associate together the ideas of these objects, and unite them in *the imagination*. Had ideas no more union in *the fancy* than objects seem to have to *the understanding*, ..." (T 1.3.6.12)

– Other examples are at T 1.3.6.4, 1.3.13.12, 1.4.1.1 & 12, 1.4.2.14, 46, & 57, 1.4.7.7, 2.3.3.2-6, 3.1.1.16-18 & 26; also compare 2.2.7.6 n. with 1.3.9.19 n.

83

83

Hume on Reason as Cognition

■ "Reason is the discovery of truth or falshood." (T 3.1.1.9)

■ "That Faculty, by which we discern Truth and Falshood ... the Understanding" (E 1.14, note in 1748/1750 editions)

■ "*reason* ... conveys the knowledge of truth and falsehood" (M App 1.21)

■ "... reason, in a strict sense, as meaning the judgment of truth and falsehood ..." (DOP 5.1)

■ See also T 2.3.3.3, 2.3.3.5-6, 2.3.3.8, 2.3.10.6, 3.1.1.4, 3.1.1.19 n. 69, 3.1.1.25-27, 3.2.2.20, M 1.7, M App 1.6.

84

84

Oxford Lectures on David Hume, 2024-25

3(b) Conceivability and Hume's Fork

85

Hume's Conceivability Principle

- Hume frequently appeals to what is generally known as his *Conceivability Principle*:

"Tis an establish'd maxim in metaphysics, *That whatever the mind clearly conceives includes the idea of possible existence*, or, in other words, *that nothing we imagine is absolutely impossible*. ..." (T 1.2.2.8)

"To form a clear idea of any thing, is an undeniable argument for its possibility, and is alone a refutation of any pretended demonstration against it." (T 1.3.6.5)

"whatever we *conceive* is possible, at least in a metaphysical sense: but wherever a demonstration takes place, the contrary is impossible, and implies a contradiction." (A 11, cf. E 12.28)

(See also e.g. T 1.3.3.3, 1.3.9.10, E 4.2, E 4.10, E 4.18.)

86

Inconceivability and Impossibility

- Hume is sometimes thought to accept the so-called the *Inconceivability Principle*, that *inconceivability implies impossibility*. The best evidence for this is:

"... We can form the idea of a golden mountain, and from thence conclude that such a mountain may actually exist. We can form no idea of a mountain without a valley, and therefore regard it as impossible." (T 1.2.2.8)

- But this evidence is weak, and he appeals to the Conceivability Principle around 30 times without ever explicitly stating or implying the converse principle.

- Hume also accepts that animals may have senses that yield ideas inconceivable to us, that there may be a vacuum or objects "specifically different" from our perceptions. For detailed discussion, see Millican ("Hume's Fork", 2017, §5).

87

87

Hume's Fork: Relations of Ideas ...

- Some propositions – which Hume in the *Enquiry* calls "relations of ideas" – are such that *their falsehood is inconceivable*.

- The closest modern term is *analytic propositions*, understood as *those whose meaning entails their truth*. These *can be known a priori* – without any dependence on experience or real existence – by inspecting ideas; hence their falsehood is inconceivable and they are *necessarily true*.

e.g. Pythagoras' Theorem. (E 4.1)

$3 \times 5 = \frac{1}{2} \times 30$. (E 4.1)

All bachelors are unmarried.

88

88

... and Matters of Fact

- Matters of Fact *cannot be known a priori*, and *their truth or falsehood are equally conceivable*:

e.g. The sun will rise tomorrow. (E 4.2)
The sun will not rise tomorrow. (E 4.2)
This pen will fall when released in air.

- Perhaps the closest modern term is *synthetic*: a proposition whose truth "is determined by the facts of experience" (Ayer, LTL 1971, p. 105).

- But Hume (like Ayer) presumes that the analytic/synthetic, a priori/a posteriori, and necessary/contingent distinctions all coincide.

89

89

Hume's Epistemological Empiricism

- Lecture 1 distinguished between *conceptual empiricism* (*all ideas* are derived from experience) and *epistemological empiricism* (roughly, *all knowledge* is derived from experience).

- Hume's Fork expresses the latter, with a refinement: *all knowledge (or even evidence) of matter of fact is founded on experience*.

- This is entirely compatible with *knowledge of relations of ideas* being a priori, based on the inconceivability of their falsehood (or more precisely, recognition that a proposition's falsehood would imply a contradiction).

90

90

Oxford Lectures on David Hume, 2024-25

Is Hume's Fork Defensible?

- Though orthodox for many years, Hume's Fork has been seriously challenged more recently:
 - W. V. O. Quine's "Two Dogmas of Empiricism" (1951) attacked the analytic/synthetic distinction.
 - Saul Kripke's *Naming and Necessity* (1972) argued against identification of the a priori/a posteriori and necessary/contingent distinctions.
 - Hilary Putnam's "The Meaning of Meaning" (1975) attacked the idea that meaning resides in our "ideas" (or anything else "in the head").
 - Millican (2017) argues that Hume's Fork stands up surprisingly well to these and other challenges.

91

91

3(c)

Hume's Dubious Dichotomy in the *Treatise*

92

The Progress of Hume's Logic

- Hume's Fork appears in *Enquiry* 4, but it is foreshadowed in the *Treatise*, where his logical framework is based on a theory of "philosophical" relations derived loosely from Locke's.
- Though very dubious, this theory of relations impacts on the argumentative structure of the *Treatise* (but fortunately, only quite superficially).
- For understanding Hume's philosophy – in the *Treatise* as well as the *Enquiry* – Hume's Fork (based on the Conceivability Principle which is prominent in both works) is a more reliable guide.

93

93

Locke on the Types of Relation

- Locke (*Essay* II xxv-xxviii) emphasises:
 - "Cause and Effect" (II xxvi 1-2)
 - "Relations of Time" (II xxvi 3-4)
 - "Relations of Place and Extension" (II xxvi 5)
 - "Identity and Diversity" (II xxvii)
 - "Proportional Relations" (II xxviii 1)
 - "Natural Relations" such as "Father and Son, Brothers ... Country-men" (II xxviii 2)
 - "Instituted, or Voluntary" relations such as "General ..., Citizen, ... Client" (II xxviii 3)
 - Various moral relations (II xxviii 4-16)

94

94

Locke to Hume on Relations

LOCKE	HUME
"Agreement"	Resemblance
Cause and effect	Cause and effect
Natural, Instituted, Moral	(see <i>T</i> 1.1.4.3, 1.1.4.5)
Relations of time	Space and time
Relations of place	
Identity	Identity
Diversity	Contrariety
Proportional relations	Proportions in quantity Degrees in quality

95

95

Hume's Dichotomy

- Hume starts *T* 1.3.1 by dividing his seven types of relation into two groups (*T* 1.3.1.1):
 - The Four "Constant" Relations
Those relations that "depend entirely on the ideas, which we compare together" (i.e. resemblance, contrariety, degrees in quality, proportions in quantity or number);
 - The Three "Inconstant" Relations
Those relations that "may be chang'd without any change in the ideas" (i.e. identity, relations of time and place, cause and effect).

96

96

Oxford Lectures on David Hume, 2024-25

A Taxonomy of Mental Operations

- Hume argues, rather simplistically, that his seven relations map neatly onto four different mental operations:
 - *resemblance, contrariety, and degrees in quality* are “discoverable at first sight” (T 1.3.1.2)
 - *proportions of quantity or number* are susceptible of demonstration (T 1.3.1.2-5)
 - *identity and relations of time and place* are matters of perception rather than reasoning (T 1.3.2.1)
 - *causation* is the only relation “that can be trac’d beyond our senses, [to] existences and objects, which we do not see or feel” (T 1.3.2.3)

97

97

	Constant relations	Inconstant relations
Perception	<u>Intuition</u>	<u>Sensory Perception</u>
	■ <i>resemblance</i>	■ <i>identity</i>
	■ <i>contrariety</i>	■ <i>situations in time and place</i>
	■ <i>degrees in quality</i>	
Reasoning	<u>Demonstration</u>	<u>Probability</u>
	■ <i>proportions in quantity and number</i>	■ <i>causation</i> *

* This explains why most of *Treatise* 1.3.2-14, nominally on “probability”, focuses on causation and causal reasoning.

98

98

Hume’s Dichotomy – the motive

- Hume gives his taxonomy of relations in order to facilitate his arguments:
 - That the Causal Maxim cannot be intuitively certain (T 1.3.3.2);
 - That relations of virtue and vice are not demonstrable (T 3.1.1.19).
- He seems to be arguing from the principle:
 - *Any proposition that is intuitively or demonstratively certain can contain only constant relations.*

99

99

The Failure of the Dichotomy

- Sadly, this is nonsense. There are many “intuitive” or “demonstrable” propositions involving identity, relations of time and place, or causation:
 - If A=B and B=C, then A=C.
 - Anything that lies inside a small building lies inside a building.
 - Every mother is a parent.
 - Anyone whose paternal grandparents have two sons, has an uncle.
- Garrett (2015, pp.92-3) attempts to defend Hume’s theory, but this seems unlikely to work ...

100

100

Demonstrability Is Not Analysable in Terms of Relations

- It is now well understood that whether a complex proposition is logically provable will often depend on things like order, bracketing, and scope, not on the nature of the specific relations involved. The first of the formulae below is demonstrable, the second is not, but they contain exactly the same relations:

$$\begin{aligned} \exists x (\forall y Bxy) &\rightarrow \forall y (\exists x Bxy) && \checkmark \\ \forall y (\exists x Bxy) &\rightarrow \exists x (\forall y Bxy) && \times \end{aligned}$$

101

101

The Source of Hume’s Mistake?

- I suggest that Hume confused, when considering propositions about objects:
 - Supervenience: *what is implied by the properties of the objects themselves*, independently of their relative situation etc.
 - Analyticity: *what is implied by our ideas (or impressions) of the objects themselves*, independently of *ideas about* their situation etc.
- (See Bennett 1971: 250-6 and 2001: 242-4; also Millican 2017: §3, which highlights Hume’s tendency to conflate objects and perceptions.)

102

102

Oxford Lectures on David Hume, 2024-25

3(d)

Kinds of Evidence and Reasoning

103

"The Kinds of Evidence"

"It is common for Philosophers to distinguish the Kinds of Evidence into *intuitive*, *demonstrative*, *sensible*, and *moral*".

(Hume, *Letter from a Gentleman*, 1745, para. 26)

- By *intuition*, Hume means immediate self-evidence: the way we know that something is identical with itself, or that 2 is greater than 1.
- *Sensible* evidence means *from the senses*.
- *Demonstrative* and *moral* (or *probable*) reasoning are types of inference identified by John Locke ...

104

104

Locke's Account of Reasoning

- In *demonstrative reasoning*, each link in the inferential chain is "intuitively" certain.
 - Characteristic of mathematical reasoning.
 - Locke often cites the proof that a triangle's angles sum to two right angles (*Essay* IV i 2, IV xv 1 etc.):

$$\begin{aligned} A &= E \\ B &= D \\ \therefore A + B + C &= E + D + C \end{aligned}$$

- Hume too calls this "demonstrative", but also (in the *Enquiry*) "reasoning concerning relations of ideas".

105

105

- In *probable reasoning*, [some or all] links in the inferential chain are merely probable.

"Tell a Country Gentlewoman, that the Wind is South-West, and the Weather louring, and like to rain, and she will easily understand, 'tis not safe for her to go abroad thin clad, in such a day, after a Fever: she clearly sees the probable Connexion of all these, viz. South-West-Wind, and Clouds, Rain, wetting, taking Cold, Relapse, and danger of Death ..." (Locke, *Essay* IV xvii 4)

- Hume's *Enquiry* mainly calls this "*moral reasoning*" or "*reasoning concerning matter of fact and existence*" (we can say "*factual inference*" for short).
- For Locke, *both* types of reasoning involve rational *perception* of the links (*Essay* IV xvii 2).

106

106

Hume on "Proof" and "Probability"

- Within the broad category of Lockean "probable arguments", Hume distinguishes between "proofs" and "probabilities" (*T* 1.3.11.2, *E* 6.0 n. 10, *E* 10.4).
 - A "proof" is an inference from *extensive* and *entirely consistent* experience, yielding inductive certainty. (For example, I have previously seen a million A's *all* followed by B's, then I see an A and predict a B.)
 - A (mere) "probable argument" is an inference from *mixed* experience, which therefore leaves some doubt.
- This is why Hume in the *Enquiry* prefers the term "reasoning concerning matter of fact" (rather than "probable reasoning") for the broader category.

107

107

A Common Misunderstanding

- Hume's Fork divides *propositions* between:
 - Relations of Ideas
 - Matters of Fact
- *Enquiry* 4.18 divides *arguments/reasonings* between:
 - "Reasoning concerning relations of ideas" (what Locke and Hume both call *demonstrative* reasoning)
 - "Reasoning concerning matter of fact" (what Locke and the *Treatise* call *probable* reasoning)
- This invites a misunderstanding (*also encouraged by two other Humean claims, as we'll see*), that demonstrative reasoning can only apply to "relations of ideas", and probable reasoning only to "matters of fact".

108

108

Oxford Lectures on David Hume, 2024-25

But I maintain that Hume's distinction between demonstrative and factual arguments matches closely with the modern distinction between ...

- A *deductive* argument (in the informal sense) is an argument in which the premises *logically guarantee* the truth of the conclusion: *it is not possible for the premises to be true and the conclusion to be false* (at the same time).
 - There is also a related (but non-Humean) *formal* notion, where a deductive argument is one that is *formally* valid.
- An *inductive* argument is one that draws a conclusion about the unobserved, by extrapolating from past experience and observations.

109

109

Problematic Humean Claim 1: “No Matter of Fact is Demonstrable”

- This claim (A 18, E 4.2, E 12.28, cf. T 1.3.7.3) is often interpreted as “no matter of fact can be the conclusion of a demonstrative argument”.
 - But consider the following argument:
 1. All crows are birds.
 2. All birds are black. \therefore All crows are black.
 - This is clearly “demonstrative” on Locke’s and Hume’s criteria: the link from premises to conclusion is certain and self-evident (i.e. “intuitive”), depending on links between the ideas, not extrapolation from experience.

110

110

An Important Distinction

- The swans argument is indeed *demonstrative* in that sense, but nobody of sense would say that it has *demonstrated* that all crows are black.
- To demonstrate *Q from P* is not the same as demonstrating *Q full stop* (*without qualification*). The latter requires that the argument’s premises are known with certainty to be true.
- Hume denies that any matter of fact can be *demonstrated* (full stop). He nowhere denies that one matter of fact can be demonstrated *from another matter of fact*.

111

111

Problematic Humean Claim 2: “Only Mathematics Has Demonstrations”

- “There remain, therefore, algebra and arithmetic as the only sciences, in which we can carry on a chain of reasoning to any degree of intricacy, and yet preserve a perfect exactness and certainty.” (T 1.3.1.5)
- “It seems to me, that the only objects of the abstract sciences or of demonstration are quantity and number ...” (E 12.27)
- Hume’s account of this limit is in terms of the *relative clarity* of mathematical and moral ideas.
 - So if we want to find *a posteriori* demonstrative arguments of any complexity, we have to look to *applied* mathematics ...

112

112

Hume on Applied Mathematics

- Hume’s most explicit discussion of “mixed mathematics” is in *Enquiry* Section 4:

“it is a law of motion, discovered by experience, that the moment or force of any body in motion [what we now call *momentum*] is in the compound ratio or proportion [i.e. is proportional to the *product*] of its solid contents [*mass*] and its velocity; and consequently, that a small force may remove the greatest obstacle ... if, by any contrivance ... we can encrease the velocity of that force, so as to make it an overmatch for its antagonist.” (E 4.13)

113

113

- The momentum of a body in motion is equal to its mass multiplied by its velocity.
- In any collision the total momentum of the colliding bodies (in any given direction) is conserved.

114

114

Oxford Lectures on David Hume, 2024-25

"Geometry assists us in the application of this law ... but still the discovery of the law itself is owing merely to experience, and all the abstract reasonings in the world could never [give us any] knowledge of it." (E 4.13)

- "Abstract reasonings" encompasses demonstrative mathematics, as in the *Treatise*:

"Mathematics ... are useful in all mechanical operations ... But 'tis not of themselves they have any influence. ... Abstract or demonstrative reasoning ... never influences any of our actions, but only as it directs our judgment concerning causes and effects." (T 2.3.3.2)

- These passages show that Hume does not restrict "demonstrative" reasoning to the a priori, because it can be applied to empirical facts.

115

115

3(e)

Introducing *Treatise* 1.3

116

Hume's Focus on Causal Reasoning

- *Treatise* Book 1 Part 3, the longest part of the work, is entitled "Of Knowledge and Probability".
 - T 1.3.1 deals with "Knowledge" (in a *strict* sense, requiring absolute certainty). Here he presents the dubious Dichotomy criticised in slides 92-102 above.
 - Building on this, at T 1.3.2.3 *causation* is identified as the only relation that can ground a "probable" inference from one object to another.
 - Accordingly the rest of *Treatise* 1.3 focuses on *causation* and *causal reasoning*, framed around the search for the impression from which the idea of *causal necessity* is derived ...

117

117

- At T 1.3.2.6-8, *individual* causes are (tentatively) found to be related to their effects by the relations of *contiguity* and *priority*.
- But a key element – identified at T 1.3.2.11 as "NECESSARY CONNEXION" – is more elusive.
 - At T 1.3.2.13, Hume decides to search two "neighbouring fields" to find this element's source:
 - First, he argues that the Causal Maxim is neither intuitively nor demonstratively certain (T 1.3.3.1-8).
 - Secondly, he turns to consider "why we conclude, that such particular causes must necessarily have such particular effects, and why we form an inference from one to another?" (T 1.3.3.9).

118

118

Second "Field": Causal Inference

- *Treatise* 1.3.4 argues that causal reasoning, if it is to result in real belief, must start from something perceived or remembered.
- T 1.3.5.1 sets out a corresponding agenda:

"Here therefore we have three things to explain, viz. *First*, The original impression. *Secondly*, The transition to the idea of the connected cause or effect [*i.e. causal inference*]. *Thirdly*, The nature and qualities of that idea [*i.e. Hume's theory of belief*]."

119

119

T 1.3.5: "Of the impressions of the senses and memory"

- Memory "perceptions" are like impressions in being more *strong and lively* – with greater *force and vivacity* – than ideas of the imagination. As quoted earlier from T 1.3.5.7 (slide 44), Hume uses this to argue that force and vivacity constitutes assent.
- Hence memory "impressions", like those of the senses, can act as a "foundation of that reasoning, which we build ... when we trace the relation of cause and effect" (T 1.3.5.7), i.e. causal inference.
- The scene is now set for Hume's famous argument concerning induction, in *Treatise* 1.3.6 ...

120

120
